## Curbside Pickup Technology Solutions

Take advantage of a curbside notification app to help manage your order deliveries in a cost-effective and simple manner. No need to download software or go through complex setup processes. No special hardware or installation. All you need is a device capable of connecting to the internet, and the same applies for your customers.

- Setup in five minutes, fully trained in ten minutes
- We can provide immediate, temporary signage with QR codes for outside your business
- Customers can scan a QR code or enter the website address into their mobile device when they arrive.
- Customers enter your retailer code from the signage, their name and phone number
- You are notified inside who is waiting for their order
- You acknowledge who is waiting....
- ... and Customers can place their phone in their window so you know who they are without having to open a window
- Deliver safely, then mark their order as completed!

At \$0.10 per transaction fee, this is a cost-effective solution with no software to install for you or your customers. You only pay for how often you use it.

There is no up-front charge for getting this software in place. There is no term commitment and we are operating on a good faith agreement with local businesses. Continue to use the software after the first month and there will be a modest \$20 / month fee to cover the costs of hosting and maintaining the software.

Need more permanent or larger signage? Work with your printer or let us help find a signage solution for you. We can work with some digital signage installed outside your building if needed.
